SUMMARY

Full-Stack Software Engineer with a strong focus on building scalable web systems and modern software platforms. Experienced in developing full-stack applications using JavaScript and Python ecosystems, working with technologies such as React, Next.js, Node.js and modern API architectures.

Currently working in enterprise IT operations supporting large-scale infrastructure environments, gaining practical experience in system reliability, incident management and identity access systems.

My background combines software development, systems engineering and digital product thinking, allowing me to design solutions that are technically robust, scalable and aligned with real business needs.

Interested in software architecture, distributed systems and high-performance web platforms.
